

Q&A

What results can you expect?

Light therapy has been referred to as Botox without the injections. Unlike Botox though, the results you see will last for two years plus and look far more natural. Results will vary and the number of treatments that you will need will depend on your skin. Typically 10 x 20 minute treatments will reduce wrinkles and improve the quality of your skin by up to 60%. The vast majority of people will see significant improvement during treatments but the full effect of a treatment program will be seen 2-4 months after the treatment program has ended.

Are there any side effects?

You may experience some reddening of the face (particularly if a photosensitiser has been used) but this will disappear after one to two days. You should wear sun block for two days after treatment.

What can you expect during a treatment?

Different salons have different treatment protocols but typically you will receive a facial or microdermabrasion treatment prior to treatment to prepare your skin. A photosensitiser will then be applied for typically 20 minutes. This will be washed off and you will then lie under the Spectrum LED for 20 minutes. Your skin will feel soft and fresh immediately after the treatment and this will be repeated weekly for a period of ten weeks. Different salons have different protocols depending on your skin condition.

Is it safe?

The light source does not have any harmful UVA and UVB. The light produced is pure red, infra-red or blue light at scientifically proven wavelengths for effective treatments. The treatment is not painful and does not cause trauma to the skin, nor is there any downtime for the patient after treatment.

How soon before I see results?

Depending on the treatment protocol and products used by the salon you may see immediate results in skin texture, tone and complexion. Nature takes time though and you will not see the full effects of the treatment for up to four months after the final treatment. Unlike most other treatments where the results are short lived, LED treatments produce long lasting results that only require the occasional "top up" treatment to maintain long lasting results.

How long will the results last?

The results from this treatment are long lasting and you can expect the improvements in your skin to last for at least two years. However it is advisable to get regular "top up" treatments every couple of months or so.

What is the recovery time?

There is no downtime after treatment.

The results speak for themselves!
